

Outbreak cases, Jan 2023–Mar 2024 (ref. 26)
76 cases (57 neonates)

No isolate banked in frozen storage
10 cases (6 neonates)

Isolates retrieved from frozen storage
158 total
66 clinical (2023) + 24 environmental +
10 follow-up (2024) + 58 historical

Not revived / failed DNA extraction
10 isolates

Isolates revived for DNA extraction
& sequencing (Table 1)
148 total

Failed whole-genome sequencing QC
22 isolates

WGS data passing QC
126 total

K. pneumoniae sensu stricto
90 isolates
42 clinical (2023–24) + 8 environmental
+ 40 historical (2012–2022)

Other species
36 isolates
K. quasipneumoniae (n=29), *K. variicola* (n=1),
K. quasivariicola (n=1), *K. africana* (n=1),
E. coli (n=4)

2023–2024 clinical + environmental
50 isolates
(42 clinical + 8 environmental)

Historical (2012–2022)
40 isolates
29 sequence types; ST39 not detected

ST39-KL62 outbreak clone
29 clinical cases
+ 3 environmental (IV-fluid) isolates
28/29 clinical isolates formed a single
transmission cluster (0–5 core-gene SNPs)

Outcomes
16 deaths among 29 cases
(55% case fatality)
